

EXPLORE WEATHER TRENDS

- Extract the data:
 1. First, I write SQL queries to extract three CSV files from the database: city_data, city_list, global_data

Queries:

- `SELECT * FROM CITY_LIST`
- `SELECT * FROM CITY_DATA`
- `SELECT * FROM GLOBAL_DATA`

city_list		city_data				global_data	
city	country	year	city	country	avg_temp	year	avg_temp
Abidjan	Côte D'Ivoire	1849	Abidjan	Côte D'Ivoire	25.58	1750	8.72
Abu Dhabi	United Arab Emirates	1850	Abidjan	Côte D'Ivoire	25.52	1751	7.98
Abuja	Nigeria	1851	Abidjan	Côte D'Ivoire	25.67	1752	5.78
Accra	Ghana	1852	Abidjan	Côte D'Ivoire		1753	8.39
Adana	Turkey	1853	Abidjan	Côte D'Ivoire		1754	8.47
Adelaide	Australia	1854	Abidjan	Côte D'Ivoire		1755	8.36
Agra	India	1855	Abidjan	Côte D'Ivoire		1756	8.85
Ahmadabad	India	1856	Abidjan	Côte D'Ivoire	26.28	1757	9.02
Albuquerque	United States	1857	Abidjan	Côte D'Ivoire	25.17	1758	6.74
Alexandria	Egypt	1858	Abidjan	Côte D'Ivoire	25.49	1759	7.99
Alexandria	United States	1859	Abidjan	Côte D'Ivoire	25.92	1760	7.19
Algiers	Algeria	1860	Abidjan	Côte D'Ivoire	25.46	1761	8.77
		1861	Abidjan	Côte D'Ivoire	25.67		

- Create charts:
 1. I use Excel to calculate 25 years moving average (25-Y MA) of temperature (start in 1875) for both Los Angeles, USA and global using AVERAGE Excel function. I attach how I calculate 25-Y MA of global data below.
 - Los Angeles, CA Data

Calibri (Body) 12
 B *I* U

C127 *fx* =AVERAGE(B102:B127)

	A	B	C	D	E	
101	1849	7.98				
102	1850	7.9				
103	1851	8.18				
104	1852	8.1				
105	1853	8.04				
106	1854	8.21				
107	1855	8.11				
108	1856	8				
109	1857	7.76				
110	1858	8.1				
111	1859	8.25				
112	1860	7.96				
113	1861	7.85				
114	1862	7.56				
115	1863	8.11				
116	1864	7.98				
117	1865	8.18				
118	1866	8.29				
119	1867	8.44				
120	1868	8.25				
121	1869	8.43				
122	1870	8.2				9.5
123	1871	8.12				
124	1872	8.19				
125	1873	8.35				
126	1874	8.43				9
127	1875	8.36	8.10961538			
128	1876	8.08	8.11653846			
129	1877	8.54	8.13038462			
130	1878	8.83	8.15846154			8.5
131	1879	8.17	8.16346154			
132	1880	8.12	8.16			
133	1881	8.27	8.16615385			
134	1882	8.13	8.17115385			8
135	1883	7.98	8.17961538			
136	1884	7.77	8.16692308			
137	1885	7.92	8.15423077			
138	1886	7.95	8.15384615			7.5
139	1887	7.91	8.15615385			
140	1888	8.09	8.17653846			
141	1889	8.27	8.18161538			

2. Next, I create line charts for Los Angeles data and global data.

- Los Angeles

- Global

▪ Los Angeles and Global Data

• Observations:

1. My city, Los Angeles, is warmer on average compared to the global average. (based on the graphs)

2. I can see that in 50 years (1875-1925), the average temperature in Los Angeles was consistent in 13.90 ~ 14.00 Celsius range. The global average temperature was consistent in 30 years (1875-1905) around 8.14 ~ 8.17 Celsius range.
3. In 25 years (from 1825-1950), the Los Angeles temperature average was increasing consistently from low 14.00 Celsius to 14.30 Celsius. In 50 years (1905-1955), global temperature average was increasing consistently from low 8.15 Celsius to 8.64 Celsius
4. In 25 years (1950-1975), the average temperature in Los Angeles was consistent in 14.31 ~ 14.34 Celsius range. We can see the same for global average temperature was; It was consistent in 25 years (1950-1975) around 8.63 ~ 8.66 Celsius range.
5. Since 1975, we can see that Los Angeles and the global average temperature is consistently increasing.
6. In my observation, I can see that the rise of the global average temperature is more quickly and more consistent than my city, Los Angeles. We can see the result of the global warming trend based on this data.
